STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

SUBJECT:

Number of Rehabilitations: October 1 to October 31,

Fiscal Years 1976 and 1977

CONTENT:

The attached table contains the total number of persons rehabilitated by State vocational rehabilitation agencies in October, 1976, the first month of Fiscal Year 1977. This begins the newly established October to September Federal fiscal year cycle.

In October, 1976, State agencies rehabilitated 25,448 persons, an increase of 2.6 percent from October, 1975, when 24,792 persons were rehabilitated.

It should be noted that some agencies reported unusually large increases or decreases in rehabilitations in October, 1976 compared to the same month a year earlier. The switch in fiscal year cycles was probably a factor in these results. Since, in addition, estimates had to be prepared for seven general agencies and two blind agencies, the October, 1976 experience should not be overly relied upon as indicating an upswing in rehabilitations.

TO:

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD DIRECTORS, ORS

University of Illinois at Urbana-Champaign

SUBJECT:

Distribution of the "Quarterly Status Report: Disability Insurance Program (SSDI) and Supplemental Security Income

Program (SSI)," July 1 to September 30, 1976

CONTENT:

The report containing caseload information on the subject programs for the transitional budget period - July 1 to September 30, 1976 - is attached.

From July 1 to September 30, 1976, State agencies rehabilitated 4,071 SSDI beneficiaries, barely a one percent increase from the 4,018 beneficiaries rehabilitated in the same three months of 1975. This small increase, however, compares favorably with the 13 percent decline in total rehabilitations during the period. Of the 4,071 rehabilitated beneficiaries, 2,330, or 57 percent, were reported by the State agencies as having met the special selection criteria, permitting the use of Trust Funds for VR services.

The SSI recipients rehabilitated during the period of July 1 to September 30, 1976 numbered 3,294, of whom 1,673, or 51 percent, were reported by the agencies as having met the special selection criteria. This compares to 2,846 recipients rehabilitated, of whom 1,370, or 48 percent, were reported as special selection criteria cases, for the same threemonth period of 1975.

QUARTERLY STATUS REPORT: SOCIAL SECURITY DISABILITY INSURANCE PROGRAM (SSDI) AND SUPPLEMENTAL SECURITY INCOME PROGRAM (SSI)

JULY 1 TO SEPTEMBER 30, 1976

HIGHLIGHTS

TABLE 1

During the transitional budget period - July 1 to September 30, 1976 - State agencies rehabilitated 4,071 SSDI beneficiaries, and 3,294 SSI recipients. The unduplicated count of SSDI/SSI rehabilitations was 6,654,an increase of 5 percent over the comparable number of rehabilitations in the same quarter a year earlier. This gain contrasts with a loss of one percent in non-SSDI/SSI severe rehabilitations and a loss of 22 percent in rehabilitations of the non-severely disabled. (There were 711 dual cases, i.e. rehabilitated persons in receipt of both SSDI and SSI payments).

As reported by State agencies, 2,330 of the rehabilitated SSDI beneficiaries, and 1,673 of the SSI recipients, were classified as having met the special selection criteria, permitting the use of Trust Funds or SSI monies for VR services. These figures represent increases of less than one percent and 22 percent, respectively, over comparable cases in July 1 to September 30, 1975.

TABLE 2

Of the 3,628 cases rehabilitated July 1 through September 30, 1976 which, according to State agency reports, had met the special selection criteria for either Trust Funds or SSI funding, 2,330, or 64 percent, were Trust Funds cases, and 1,673, or 46 percent, were SSI-funded cases. The overlap is caused by 375, or 10 percent, dual cases. Similar percentages were observed among cases not rehabilitated and active cases on September 30, 1976.

TABLE 3

A total of 88,967 SSDI beneficiaries, and 69,334 SSI recipients were served (statuses 10-30) by State agencies during July 1-September 30, 1976. Of these totals, 58,655 SSDI and 41,843 SSI cases served were reported by State agencies to have met the special selection criteria. These represented increases of 7 percent and 26 percent respectively over similar cases served during July 1-September 30, 1975 quarter.

TABLE 4

On September 30, 1976, there were 72,135 SSDI/SSI cases (unduplicated count) in the referral and applicant statuses, down 11 percent from September 30, 1975.

The unduplicated number of SSDI/SSI cases in extended evaluation on September 30, 1976 came to 11,320, up 14 percent over September 30, 1975.

The unduplicated number of SSDI/SSI cases not accepted for VR services during the July 1 to September 30, 1976 period numbered 30,930, down 7 percent from July 1 to September 30, 1975.

TABLE 5 AND ARE SEED AND ADDITIONAL SEED AND ADDITIONAL SEED AND ADDITIONAL ADDITIONAL AND ADDITIONAL ADD

Of the 125,883 SSI recipients in agency caseloads at any time (statuses 00-30) during the period of July 1 to September 30, 1976, 14,739, or 12 percent, were recipients by reason of blindness. Blind recipients represented 6 percent of the not accepted SSI cases, 6 percent of the not rehabilitated, and 17 percent of the rehabilitated. Out of 823 SSI-blind active case closures, 55, or 67 percent, were rehabilitated. The comparable rehabilitation rate among SSI-disabled closures was only 42 percent.

TABLES 6 & 7

For the July 1 to September 30, 1976 period, California led all agencies in the number of both SSDI and SSI rehabilitations reported as having met the special selection criteria, with 257 and 262 respectively.

For general agencies, the proportion of cases reported as having met the special selection criteria ranged from 89 percent in Arkansas to 27 percent in Wyoming among rehabilitated SSDI recipients, and from 79 percent in Virginia to 20 percent in Wyoming among rehabilitated SSI recipients.

INFORMATION MEMORANDUM RSA-IM-77-36

at Urbana-Chambaio

February 10, 1977

TO:

STATE REHABILITATION AGENCIES (GENERAL)
STATE REHABILITATION AGENCIES (BLIND)
ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

SUBJECT:

Number of Rehabilitations: October 1 to November 30,

Fiscal Years 1976 and 1977

CONTENT:

The attached tables contain the total number of persons rehabilitated by State vocational rehabilitation agencies during the subject two months of Fiscal Years 1976 and 1977.

During the two months of October and November of 1976, State agencies rehabilitated 51,541 persons, an increase of 2.7 percent from the same two months of 1975, when 50,200 persons were rehabilitated. This modest increase can be attributed to extremely large gains reported in two of the biggest agencies. In fact, apart from these two agencies, a decline of 8.6 percent was registered for the other 82 reporting agencies as a group. Fifty-two agencies experienced declines in rehabilitations for the two-month period.

Rehabilitations in November of 1976 numbered 25,850, a 1.7 percent increase from the 25,408 rehabilitations in November of 1975.

Acting Commissioner of Rehabilitation Services

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

SUBJECT:

Distribution of Source of Referral of Cases Closed by State Vocational Rehabilitation Agencies During Fiscal Year 1975

CONTENT:

This report deals with the sources of referral of clients of State vocational rehabilitation agencies whose cases were closed during Fiscal Year 1975. In addition, trends in sources of referral of clients rehabilitated and not rehabilitated since Fiscal Year 1971 are shown. Of special interest is the distinction made between severely and non-severely disabled persons and their respective referral sources among closures effected in Fiscal Year 1975.

A referral source is the institution, agency or individual first bringing the client to the attention of the vocational rehabilitation agency. No secondary referral sources are considered in this report. Rehabilitation agencies are encouraged to list, if possible, the referral source as an organization, an institution or an agency rather than an individual.

Thirty categories of referral sources have been classified under the following seven basic groups; 1) educational institutions, 2) hospitals and sanitoriums, 3) health organizations and agencies, 4) welfare agencies, 5) public sources (not specifically education, health or welfare), 6) private sources (not specifically health, education or welfare) and 7) individuals.

The tabulations and data presented herein were derived from the individual Case Service Report (Form OHD-RSA-300) submitted by State vocational rehabilitation agencies.

For Fiscal Year 1975, the report utilizes data representing 1,039,696 cases, or 97.4% of the total closures that year.

Cases referred by certain sources of referral consistently lead to a likelier rehabilitation success than those referred by other sources. For the five-year period from Fiscal Year 1971 to Fiscal Year 1975, the cases most likely to be rehabilitated were referred by artificial appliance companies, employers and physicians, while those cases with the lowest rehabilitation rates (i.e. rehabilitations as a percent of all closures from the active statuses) had been referred originally by mental hospitals, correctional institutions and the Social Security Administration.

The contrast between the degree of success of those clients referred by public and private sources appears to be consistent for the five year period, with referrals from private sources likelier to be rehabilitated. One may infer, therefore, that the motivation for rehabilitation of clients referred on a voluntary basis is different from that of persons referred to satisfy mandatory requirements.

Assistant Commissioner For

Program Management

Source of Referral of Cases Closed by State Vocational Rehabilitation Agencies During Fiscal Year 1975 (Statistical Note No. 45) HIGHLIGHTS

Table 1: Source of Referral of Cases Not Accepted for Vocational Rehabilitation Services

- 1. The source of referral was reported for 596,341 persons who were not accepted for vocational rehabilitation services during Fiscal Year 1975. This figure represented 98.5% of the closures from statuses 00 and 02 in that year.
- 2. Clients initially referred by the Social Security Administration and public welfare agencies together accounted for 51.7% of the total cases not accepted in Fiscal Year 1975 Social Security, 40.4% or 241,174 cases and public welfare, 11.3% or 67,440 cases. (In Fiscal Year 1970 Social Security Administration accounted for only 24.7% of the total cases not accepted for services).
- 3. Over half the total number of cases (57.8% or 182,015 cases) closed from referral status (status 00) had originally been referred by the Social Security Administration. Public welfare agencies accounted for another 9.8%. (In Fiscal Year 1970, the Social Security Administration contributed 45.9% to the closure from referral).
- 4. Of the applicants closed (status 02) not accepted, 21.0% had been referred by the Social Security Administration, which was once again the leading source of referral. Public welfare agencies and self-referrals accounted for 13.0% and 12.7% respectively, of the total cases closed from the applicant status, and were the second and third most common referral sources of such closures. (In contrast, the Social Security Administration accounted for only 6.7% of these closures in Fiscal Year 1970 and was only the sixth most common referral source that year).
- 5. Although the total closures from referral exceeded those closures from applicant status by 12.1%, closures from all but three referral sources presented the opposite picture. This oddity was brought about by the fact that the dominant source, the Social Security Administration, referred three times as many closures from referral as from applicant status (182,015 from status 00 compared to 59,159 from status 02). (In Fiscal Year 1970, the closure "gap" for Social Security referrals was six times as great from the referral status as from the applicant status.) Similarly, crippled children's agencies and workmen's compensation agencies accounted for more closures from the referral status than from the applicant status in Fiscal Year 1975.

Table 2A: Source of Referral of Cases Rehabilitated by State Vocational Rehabilitation Agencies

1. In contrast to a decrease of 10% in total rehabilitations in Fiscal Year 1975 from the previous fiscal year, the number of rehabilitations initially referred by ten of the thirty referral sources increased. Rehabilitations referred by Community Health Centers and the Social Security Administration were the most prominent among these ten referral sources.

- 2. The number of rehabilitations originally referred by the Social Security Administration increased steadily from the Fiscal Year 1971 figure of 7,935 to 11,474 in Fiscal Year 1975. It should be noted, however, that persons referred by the Social Security Administration, the largest single source of referral, comprised only 3.7% of the total rehabilitations in Fiscal Year 1975. This, too, was a steady increase from 2.9% of the total rehabilitations in Fiscal Year 1972.
- 3. With a few exceptions, the percent of rehabilitations originally referred by each referral source fluctuated no more than 1% between Fiscal Year 1971 and 1975.

However, the percent of successful closures of clients referred by mental hospitals showed a steady downward trend. In Fiscal Year 1971, mental hospitals had originally referred 8.1% of the total rehabilitations, compared to 5.4% in Fiscal Year 1975. Likewise, clients referred by State employment services comprised successively lower percents of the total rehabilitations during the five-year period.

Table 2B: Source of Referral of Cases Closed Not Rehabilitated in Fiscal Year 1975

- 1. Five referral sources throughout the Fiscal Year 1971 Fiscal Year 1975 time span continued to be, with slight variation in rank, the highest contributors to the cases closed without successfully completing the Vocational rehabilitation process. Those referral sources and their closures who were not rehabilitated in Fiscal Year 1975 as percents of the total cases closed not rehabilitated were: public welfare agencies, 16,738 cases or 12.4%, correctional institutions, 15,940 or 11.8%, self-referred, 13,913 or 10.3%, mental hospitals, 13,157 or 9.7%, elementary or high school, 12,160 or 9.0%.
- 2. The percent of cases closed who were not rehabilitated remained about the same for most referral sources for the time period Fiscal Year 1971-1975.

An exception to this was observed in the closures referred by mental hospitals. During the time span from Fiscal Year 1971 - Fiscal Year 1975, the percent of rehabilitations referred by this referral source successively decreased from 12.4% in Fiscal Year 1971 to 9.7% in Fiscal Year 1975. In like manner, non-rehabilitated closures referred by State employment agencies decreased from 4.8% in Fiscal Year 1971 to 3.4% in Fiscal Year 1975.

On the other hand, closures of cases referred originally by elementary or high schools, community mental health centers and public welfare agencies made up an increasing portion of the non-rehabilitated clients for the five -year time period.

Table 3A: Source of Referral for Severe and Non-Severe Cases Rehabilitated in Fiscal Year 1975

- 1. Of the 308,212 rehabilitations for which referral source was reported in Fiscal Year 1975, 36.3% or 111,978 were severely disabled. Fiscal Year 1975 marks the first year in which data on the severely disabled have been categorized according to referral source, or any other characteristic.
- 2. The Social Security Administration referred only 3.7% of the total rehabilitations in Fiscal Year 1975. However, Social Security Administration accounted for 6.4% of the severely disabled rehabilitations contrasted to only 2.0% of the non-severely disabled.
- 3. The severely disabled comprised 78.4% of the rehabilitations referred by schools for the handicapped. In addition, the severely disabled made up more than 50% of the rehabilitations referred from six other sources: Social Security Administration (63.8%), State Vocational Rehabilitation agencies (52.2%), educational institutions other than schools for the handicapped, academic schools or vocational schools (53.8%), mental hospitals (57.4%), rehabilitation facilities (54.3%) and "other" private health agencies (51.9%).

On the other hand, the severely disabled comprised only 10.4% of all rehabilitations referred by correctional institutions, 21.7% of those referred by employers and 27.8% referred by physicians.

4. Those cases which were self-referred comprised the greatest portion of rehabilitations of the severely disabled (14.7%) and the non-severely disabled (13.8%). The second most common source of referral were elementary or high schools, which accounted for 11.2% of the severely disabled and 12.8% of the non-severely disabled.

On the other end of the scale, state crippled children's agencies, private welfare agencies and colleges comprised less than one percent of the totals of both groups.

Table 3B: Source of Referral for Severe and Non-Severe Cases Closed Not Rehabilitated in Fiscal Year 1975

- 1. A total of 135,143 cases reporting referral source were closed not rehabilitated in Fiscal Year 1975. Of these, 41.0% or 79,740 were considered severely disabled.
- 2. The largest number of cases closed not rehabilitated had been referred by public welfare agencies (12.4%).
- 3. The leading referral sources of the severely disabled cases who were not rehabilitated were mental hospitals (13.8%).
- 4. The severely disabled made up 71.2% and 70.2% of those cases referred by the schools for the handicapped and the Social Security Administration, respectively, who were not rehabilitated. These sources had the highest percent

of severely disabled of their rehabilitated as well as not-rehabilitated cases.

On the other hand, the severely disabled accounted for only 10.5% of all the cases not rehabilitated who were referred by correctional institutions and 28.7% of those cases referred by vocational schools.

Table 4: Rehabilitation Rates for Severe and Non-Severe Closures by Referral Source

- 1. Of all closed cases from the active statuses for which source of referral was reported in Fiscal Year 1975, 69.5% had been rehabilitated. A somewhat higher percent of the non-severe closures were rehabilitated, 71.1%, compared to 66.9% among the severely disabled.
- 2. Referrals by appliance companies were most likely to be rehabilitated 93.6% of all such cases closed were rehabilitated in Fiscal Year 1975. This figure breaks down to 91.5% for severe and 96.0% for non-severe. At the other end of the scale, closures originally referred by mental hospitals were successfully rehabilitated in only 55.7% of the closed cases, success being slightly higher for the non-severe than the severe; 56.2% and 55.3%, respectively.
- 3. For most referral sources, the severe closures had a slightly lower percentage of rehabilitations than did the non-severe closures. The differences were not surprising in view of the added difficulty in rehabilitating some severe cases. However, the rehabilitation rate among the severely disabled referred by rehabilitation facilities was greater than that of the non-severely disabled referred by the same source (71.6% severe rehabilitation rate to 60.6% non-severe). This experience was shared with eight other referral sources including schools for the handicapped.

> INFORMATION MEMORANDUM RSA-IM-77-38 February 11, 1977

TO:

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

SUBJECT:

Vocational Rehabilitation Caseload Distribution: Total, Severe

and Non-severe, July 1 to September 30, 1975 and 1976

CONTENT:

The downward trend in overall caseload activity established in Fiscal Year 1976 was carried over into the Transitional Budget Period-July 1, 1976 to September 30, 1976. During this period, State agencies accepted 140,118 new cases into the active caseload, 4.6 percent less than in the comparable quarter a year earlier. Only 49,203 rehabilitations were effected during the Transitional Budget Period, 13.4 percent less than the number in the July-September quarter of 1975. The total number of active cases on hand September 30, 1976, 770,228, reflected a decline of 5.0 percent in the total caseload from the same date in the prior year.

On the other hand, the severe caseload continued to increase. Of the total 770,228 cases on hand September 30, 1976, 362,510 or 47.1 percent were severe, an increase of 7.2 percent in the severely disabled caseload from the same date in the prior fiscal year. During the Transitional Budget Period, 21,403 severely disabled rehabilitations were accomplished, roughly one percent more than in the comparable quarter of the previous year. Severely disabled clients accounted for 45.7 percent of the active cases closed during the period, 43.5 percent of all persons rehabilitated and 48.4 percent of all cases closed not rehabilitated. These caseload items increased from 39.7 percent, 37.5 percent and 43.4 percent, respectively, reported for the same period of the prior year.

Assistant Commissioner for Program Management

<u>Vocational Rehabilitation Caseload Distribution and Percent Change From Prior Year - Transitional Budget Period</u> (July 1 to September 30, 1976)

TOTAL CASELOAD

Table 1A - Referrals-Status 00

- 1. Total referrals available to State rehabilitation agencies during the Transitional Budget Period $\frac{1}{2}$ (July 1 to September 30, 1976) numbered 342,079-a decrease of 14.5 percent from the same three-month period a year earlier. All ten regions reported a decline in referrals available this quarter which was not considered by the Federal Government as a part of either Fiscal Year 1976 or 1977.
- 2. New referrals during the TBP 76/77 totalled 239,960, a decline of 12.9 percent from new referrals in the comparable quarter of the previous year. All regions experienced a decline from the prior year in the number of new referrals for the period, with Regions 2, 6 and 9 reporting decreases in excess of twenty percent.
- 3. Total referrals processed during the TBP 76/77 reflected a 12.6 percent decrease from the comparable quarter a year earlier with referrals placed into applicant status (02) dropping 12.2 percent and referrals not accepted for VR or extended evaluation (Status 08) decreasing 14.0 percent.
- 4. A total of 101,782 referral cases were reported an hand September 30, 1976, a decrease of 18.5 percent from the same date of the prior year. Regions 6 and 9 were the only regions which reported an increase in such cases.

Table 2A - Applicants-Status 02

- 5. Total applicant cases available to State agencies during the TBP 76/77 decreased 10.9 percent to 497,660 cases from the July to September quarter of 1975. All but two regions (1 and 8) shared in this decline.
- 6. New applicants during this period declined by 12.2 percent to 182,050 cases. Regions 1, 8 and 10 experienced slight gains in the number of new applicants.
- 7. State agencies reported a total of 177,527 applicant cases processed in the quarter ended September 30, 1976. Of these cases, the majority (55.8 percent) were accepted for VR (Status 10) while an additional 5.7 percent were accepted for extended evaluation (Status 06). Those cases not accepted for either vocational rehabilitation or extended evaluation comprised 38.4 percent of the total applicant cases processed.
- 8. Agencies reported a total of 320,133 applicant cases on hand September 30, 1976, a decrease of 11.5 percent from those reported for the same date
- 1/ All further references to this period will be denoted as TBP 76/77.

in 1975. Decreases were noted in nine of the ten regions; the caseload level of applicants in Region 8 increased 5.0 percent over the level reported in the prior year.

Table 3A - Extended Evaluation Cases-Status 06

- 9. Extended evaluation cases available to State agencies during the period declined 2.0 percent to 41,713 from the same period in the prior year. An increase in the total number of such cases available during the period was reported for half of the regions.
- 10. There were 32,274 extended evaluation cases in agency caseloads on September 30, 1976, a decline of 2.0 percent from the level of such cases on the same date in 1975.

Table 4A - Active Cases-Statuses 10-24

- 11. Of the total 860,117 active cases available (served) during the period, 87.9 percent (755,999 cases) were on hand at the beginning of the period and 12.1 percent (140,118 cases) were new. These served cases were 4.6 percent less than in the comparable quarter a year earlier.
- 12. New active cases decreased by 15.5 percent to 104,118. Each region except Region 1 experienced a decline in new active cases during the TBP 76/77, with Regions 6 and 9 showing declines in excess of thirty percent.
- 13. Total active cases processed (closed) decreased 1.4 percent from those processed during the same period of Fiscal Year 1976; the number of rehabilitations decreased by 13.4 percent for the same period. However, cases closed not rehabilitated after the individualized written rehabilitation program was initiated (Status 28) increased 19.5 percent while cases closed before the individualized written rehabilitation program was initiated (Status 30) increased 15.3 percent over the July to September, 1975 period.
- 14. There were 770,228 active cases reported on hand on September 30, 1976, a decrease of 5.0 percent from the same date in the prior fiscal year.

Table 5A - Cases on Hand at End of Period-Statuses 10-24

15. Of the total 770,228 cases on hand September 30, 1976, the numbers of clients in program development (Statuses 10-12), counseling and guidance only (Status 14), and restoration or training (Statuses 16-18), all decreased from the same date of the prior year by 8.2 percent, 5.9 percent and 8.8 percent, respectively. On the other hand, the numbers of clients ready for employment (Status 20), in employment (Status 22), and with service interrupted (Status 24), increased from September 30, 1975 by 8.9 percent, 5.8 percent and 8.6 percent, respectively.

Table 6A - Total Caseload During Period-Statuses 00-30

16. There was a total of 1,445,226 cases in all statuses (00 to 30) reported by State agencies from July 1, 1976 to September 30, 1976, a decrease in cases of 7.5 percent from the same period a year ago. Region 1 was the only region reporting an increase in its total caseload during the TBP 76/77 (1.7 percent).

Table 7A - Cases on Hand at Beginning of Period

17. For July 1, 1976, State agencies reported fewer cases in all statuses than on July 1, 1975, with the greatest decrease occurring in cases in referral (Status 00) (17.8 percent). Only Region 1 entered the period with more cases.

Table 8A - Cases Processed For Eligibility During Period

- 18. A total of 235,038 cases was processed for eligibility during the TBP 76/77. Of these processed cases, 44.3 percent were accepted for VR services and 55.7 percent were not accepted. Only 29.9 percent of cases processed in Region 9 were deemed eligible for VR.
- 19. Overall, the number of cases processed for eligibility declined by 10.9 percent from the July to September period of 1975. The number of cases accepted for VR dropped by 15.5 percent and the number not accepted declined by 6.9 percent. Region 1 was the only region where increases occurred both in cases accepted and not accepted for VR services.

Table 9A - Cases Closed During Period

- 20. Total cases closed during the period (220,809) decreased 4.7 percent from those cases closed during the comparable period in the prior year.
- 21. Only cases closed from extended evaluation (Status 06 to Status 08) and cases closed not rehabilitated (Statuses 28 and 30) increased over the same period in the previous year (7.0 percent and 18.5 percent, respectively). Regions 5, 9 and 10 were the only regions reporting increases in rehabilitations (4.1 percent, 0.8 percent and 15.5 percent, respectively).

Table 10A - Cases on Hand at the End of Period

- 22. The total cases on hand September 30, 1976 (1,224,417 cases) decreased 8.0 percent from the same date in the prior year, with the largest single decrease (18.5 percent) occurring in referrals (Status 00).
- 23. Although various regions reported increases in the number of cases on hand at the end of the period in specific components of the VR process, all

retained the largest proportion of severely disabled cases on hand September 30, 1976, 61.3 percent.

Table 12A - Severe and Non-Severe Caseload Distributions-Statuses 10-30

- 29. Among severely disabled cases, 52.1 percent of the 41,086 reported closures were closed rehabilitated, while 57.0 percent of the 48,803 non-severely disabled cases reported closed were rehabilitated. Both proportions were roughly seven points below the rehabilitation rates experienced one year earlier.
- 30. Only Regions 1 and 5 reported higher rehabilitation rates for severe than for non-severe cases during the TBP 76/77.

<u>Table 13A - Severe and Non-Severe Caseloads: Percent Change From a Year Ago-Statuses 10-30</u>

- 31. Nationally, the total number of severely disabled cases served during the TBP 76/77 increased by 7.8 percent to 403,596 from the same period a year ago, whereas the number of non-severe cases served declined by 13.5 percent to 456,521.
- 32. Region 5 was the only region which reported a decline in severely disabled cases served, down 5.1 percent from the comparable quarter in the prior year.
- 33. Newly accepted cases designated as severely disabled increased by less than one percent from the July to September period of the prior year. Non-severe new cases reported a dramatic decline of 27.2 percent from the prior year.
- 34. The number of severely disabled cases rehabilitated increased by only one-half of one percent during the TBP 76/77, while the number of non-severely disabled cases rehabilitated decreased by 21.7 percent.
- 35. Regions 1 and 9 experienced the largest increase in severely disabled cases rehabilitated from a year ago, 32.1 percent and 27.6 percent, respectively. Region 3, on the other hand, had a loss of 33.6 percent in rehabilitations of the severely disabled.
- 36. Severe cases closed not rehabilitated increased considerably by 32.0 percent in July to September 1976 compared to a modest 8.0 percent increase in unsuccessful closures among the non-severely disabled.
- 37. Nationally, the number of severely disabled cases remaining in the active statuses on September 30, 1976 362,510 cases increased by 7.2 percent from September 30, 1975. Only Regions 5 and 6 reported decreases in this category.
- 38. Nationally, non-severe cases on hand at the end of the TBP 76/77 407,718 cases declined by 13.8 percent from September 30, 1975. All regions reported year-to-year declines.

INFORMATION MEMORANDUM RSA-IM-77-32

February 3, 1977

TO:

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD DIRECTORS, ORS at Urbana-Champaign

SUBJECT:

Preliminary Report: Comparison of Characteristics of Severely and Non-Severely Disabled Clients Rehabilitated During Fiscal Years 1975-1976

CONTENT:

The attached table and report compare the personal and program-related characteristics of severely and non-severely disabled clients rehabilitated by State vocational rehabilitation agencies in Fiscal Years 1975-1976. Although the data in this report for Fiscal Year 1976 are considered preliminary, they encompass approximately 90 percent of all cases closed rehabilitated during that year (94 percent of the severe cases and 87 percent of the non-severe cases are also represented). Comparable data for Fiscal Year 1975 are also included to indicate trends.

The proportion of severely disabled clients among all clients rehabilitated increased from 35.7 percent in Fiscal Year 1975 to 40.5 percent in Fiscal Year 1976. This increase also is reflected in the percentage of severely disabled among all rehabilitations for the individual characteristics.

Each characteristic discussed compares the percentage distribution of each item among severe and non-severe individuals for Fiscal Years 1975 and 1976. Primarily, the narrative presents information from Fiscal Year 1976 but there will be occasional references to Fiscal Year 1975 to indicate any changes which may have occurred.

Acting Commissioner of Rehabilitation Services

COMPARISON OF CHARACTERISTICS OF SEVERELY AND NON-SEVERELY DISABLED CLIENTS REHABILITATED DURING FISCAL YEARS 1975-1976

SUMMARY

Overall, there was a six percent decline in the total number of persons rehabilitated from 324,039 in Fiscal Year 1975 to 303,328 in Fiscal Year 1976. There were 180,390 non-severely disabled individuals rehabilitated in Fiscal Year 1976. This represented a decline of 13 percent from the 208,293 non-severely disabled clients rehabilitated in Fiscal Year 1975. Conversely, the number of severe clients rehabilitated increased six percent from 115,746 during Fiscal Year 1975 to 122,938 during Fiscal Year 1976. The proportion of severely disabled clients among all rehabilitations rose from 35.7 percent in Fiscal Year 1975 to 40.5 percent in Fiscal Year 1976.

This increase in severely disabled rehabilitations is reflected in the percentage of severely disabled rehabilitations among all rehabilitations for the individual characteristics. However, the proportion of severely disabled among all clients rehabilitated who were disabled from "other character, personality and behavior disorders" or referred by a correctional institution doubled from 10 percent during Fiscal Year 1975 to roughly 20 percent during Fiscal Year 1976. This is unusual because of the overwhelming expectancy for these items to be classified as non-severe.

The percentage distribution of the selected characteristics for the severe and non-severe groups of clients did not change significantly from Fiscal Year 1975 to the preliminary tabulations for Fiscal Year 1976. As expected, fewer of the severely disabled as compared to the non-severely disabled, could be placed into the competitive labor market while many more of them were necessarily closed out as homemakers, unpaid family workers and sheltered workshop workers. Earnings at closure for the severely disabled who had earnings continued to lag behind earnings for the comparable non-severe group. The assumption that the severe group of clients remain in the vocational rehabilitation process for significantly longer periods of time than the non-severely disabled is again not supported by this current report. The severely disabled averaged only about one month longer in the active caseload during Fiscal Year 1976. This is a decline from the one and one-half months longer average time spent in the caseload which was reported for Fiscal Year 1975.

The last item in this report concerns the reasons for unsuccessful case closures. The most prevalent single reason, irrespective of the severity of the disability, was inability to contact or locate the client.

HIGHLIGHTS

Age.--On the average, those clients with severe disabilities were three years older than the non-severely disabled clients (34 years vs. 31 years). Clients 55 years of age and older who comprised 13 percent of the severely disabled group accounted for only seven percent of the non-severe group. During Fiscal Year 1976, over half (57 percent) of the clients, age 55 or older, had substantial employment handicaps. This was an increase from the 51 percent so disabled during Fiscal Year 1975.

Sex. -- Slightly more than half of both groups were males.

Race. -- In Fiscal Year 1976, the representation of members of minority racial groups was slightly lower among the severely disabled (23 percent severe vs. 26 percent non-severe). In Fiscal Year 1975, one out of every five severely disabled clients was a member of a racial minority as opposed to one out of every four of the non-severely disabled group.

<u>Spanish surname.</u>--Both groups were comprised of relatively few clients with Spanish surnames (seven percent vs. six percent of the residual group).

Education.--Fifty-four percent of the clients who had not received any formal education at time of referral, in Fiscal year 1976, were severely disabled. This compares to 43 percent reported in Fiscal Year 1975. On the average, both groups had completed roughly $10\frac{1}{2}$ years of schooling. One out of every five of the severely disabled had received special education as compared to one out of every ten of the non-severe group. This difference can be attributed to the larger relative number of mental retardates who are included among the severely disabled.

<u>Dependents.</u>--Combined, the members of both groups of clients with dependents registered an average of 2.5 dependents. The severely disabled were more frequently without dependents (69 percent vs. 60 percent of the non-severely disabled).

Family size.--Severely disabled clients were more apt than the non-severe to be living alone or with one other person (46 percent vs. 39 percent). In fact, during Fiscal Years 1975 and 1976, slightly more than 40 percent (41 percent and 44 percent, respectively) of all clients who reported one or two persons in the family had severe disabilities. On the average, the severe and non-severe were members of families consisting of 3.2 and 3.5 persons, respectively.

Family income (monthly).--During Fiscal Year 1975 the median monthly family income at referral was slightly less for clients with substantial handicaps (\$245 for the severely disabled as compared to \$253 for all other clients). Although both groups registered increases in Fiscal Year 1976, the income of the severely disabled clients continued to be less (\$253 for the severe group and \$270 for the non-severe group)

Marital status. -- Severely disabled clients who comprised half of all widowed clients were more apt to have never married (46 percent vs. 41 percent), but less likely to have experienced marital dissolution because of death, divorce or separation (22 percent vs. 24 percent).

<u>Veteran status</u>.--Only three percent of both groups were former members of the armed forces in Fiscal Year 1976. This is a slight increase from two percent in Fiscal Year 1975.

Primary source of support. --Relatively fewer of the severely disabled were primarily supported by their own wages (13 percent vs. 22 percent of the remaining group) or by their families and friends (44 percent vs. 50 percent of the non-severe). On the other hand, as would be expected, only the severely disabled reported SSDI benefits as their primary source of support. Roughly one of every eleven severely disabled clients was mainly supported by such funds. Also, the severely disabled were more often primarily dependent on other public funds provided in the form of public assistance payments or support in public institutions (23 percent vs. 19 percent of the residual group).

Source of referral. -- Slightly more than one-third of the rehabilitated clients, irrespective of disability, were referred for vocational rehabilitation services by individuals (including the client and physicians). Those clients who were referred for VR services by educational institutions other than elementary or high school were primarily clients with severe disabilities (60 percent severe). Twenty-three percent of the clients with severe handicaps were frequently referred from health related sources such as hospitals and sanitoria, rehabilitation facilities, and other health organizations and agencies (23 percent vs. 15 percent of the residual group). Since clients referred by the Social Security Administration are generally severely disabled (69 percent severe), such referrals were naturally greater among the severely disabled (eight percent vs. three percent of the non-severely disabled). Comparatively few, only 21 percent, of the clients referred by the correctional institutions in Fiscal Year 1976 were severely disabled. However, this proportion is twice as much as the 10 percent severely disabled so referred in Fiscal Year 1975. Usually clients who are penal offenders are individuals who do not have medical impairments which substantially hamper their employment. Therefore, this increase in the number of severe clients referred by correctional institutions is quite unexpected.

Major disabling condition.--Although members of both groups of clients were most often disabled as a result of mental illness, the mental illness rate among the severely disabled was well below that observed for the non-severe group. Of every 100 severely disabled clients, 25 were mentally ill, whereas among the non severe, 32 out of every 100 were disabled from some form of mental illness. Psychosis and psychoneurosis accounted for the bulk (61 percent) of the severely disabled clients who were mentally ill, but only 28 percent of

the non-severe who were mentally ill. In Fiscal Year 1976, other mental illness ("other character, personality and behavior disorders"), the most common disability grouping overall, accounted for six percent of the severely disabled as opposed to 15 percent of the non-severely disabled clients. These proportions are a change from Fiscal Year 1975 when only three percent of the severe group and 17 percent of the non-severe group were so disabled. The unexpected rise in the proportion of severe clients who were disabled from "other character, personality and behavior disorders" is very unusual because of the generally non-severe nature of this disability. However, it is probable that this increase in the number of severe individuals among those disabled from "other mental illness" is a direct result from a similar increase in the percentage of severely disabled clients among referrals by correctional institutions (10 percent severe in Fiscal Year 1975 vs. 21 percent severe in Fiscal Year 1976).

Among the severely disabled, mental illness was followed closely by orthopedic impairments as a leading major disabling condition. One-fifth of the severe group of clients were orthopedically impaired as compared to 16 percent of the non-severely disabled clients.

Another well-represented disability among the severely disabled was mental retardation which was roughly twice as prevalent among the severely disabled (17 percent vs. nine percent of the non-severe group). Roughly five of every seven of the mentally retarded among the severely disabled were either moderately or severely retarded, and, therefore, automatically classified as severe.

Finally blindness accounted for eight percent of the severely disabled and deafness for five percent.

Public assistance status at referral.--Public assistance recipients at the time of referral were more prevalent among the severely disabled (23 percent vs. 16 percent of the residual group). Clients with substantial handicaps to employment received 45 percent of the aggregate monthly amount of \$7.1 million given for public assistance during Fiscal Year 1975 (\$3.2 million for the severe vs. \$3.9 million for the non-severe). In Fiscal Year 1975, only 40 percent of the aggregate monthly amount of \$8.0 million was received by the severely disabled. The distribution was \$3.2 million for the severe and \$4.8 million for the non-severe group.

Public assistance status at closure.--By the time of case closure, the proportion of severely disabled clients receiving public assistance payments had decreased from 23 percent to 18 percent whereas for the non-severe the proportion was reduced from 16 percent to seven percent. The aggregate monthly amount of public assistance decreased 37 percent to \$4.4 million but the percentage received by the severely disabled increased from 45 percent to 59 percent (\$2.6 million for the severe vs. \$1.8 million for the non-severe). The fact that more of the severely disabled clients remained on public assistance is probably the consequence of the severe nature of their dis-

\$1047 in Fiscal Year 1976. Severely disabled clients whose cases were closed rehabilitated that year received services which averaged \$1271, \$384 more than the comparable mean cost of \$887 for services provided to all other rehabilitated clients. The mean costs of services for clients reporting on cost were \$1158 for the severe group and \$822 for the non-severe group. It is interesting to note that the median costs of services provided rehabilitated clients were less than half the average costs for these same services (\$462 for the severely disabled vs. \$408 for the residual group of clients). The higher costs of services for the severely disabled clients reflect the large proportions of clients among them who were disabled from blindness, certain orthopedic impairments, and heart disease. Past studies have shown that case service costs for clients with these disabilities typically average more than \$1000. Case service expenditures in excess of \$1000 were observed for slightly more than one-fourth (28 percent) of the residual group.

SSDI status at closure.--Expectedly, severely disabled clients were far more likely to be applicants for SSDI benefits at the time of case closure (23 percent vs. five percent of the non-severely disabled). Sixty-nine percent of the severely disabled applicants were receiving benefits at the time of case closure. Of course, due to the non-severe nature of their disabilities, members of the residual group were not eligible for such benefits.

Previous closure. -- Severely disabled rehabilitations comprised 41 percent of all rehabilitations during Fiscal Year 1976, but 51 percent of all clients rehabilitated with previous involvement with the vocational rehabilitation program were severely disabled. Eleven percent of the clients with substantial employment handicaps had been through the rehabilitation process previously with about two-thirds (eight percent) of them being successful on their earlier efforts. This compares to eight percent of the non-severe with five percent previously rehabilitated.

Time spent in the vocational rehabilitation process.—On the average, the severe group of clients spent roughly one month more in the referral-applicant statuses, statuses 00-02, than the non-severe group (4.5 months for the severe vs. 3.3 months for the non-severe). There was only a difference of about one month (0.9 months) in the overall average time required to rehabilitate the two groups of clients (17.9 months for the severe group vs. 17.0 months for the non-severe group from the time of acceptance, status 10, to rehabilitation closure, status 26).

Time in training.—Clients with severe disabilities were more apt to have spent a maximum of 18 months in training (70 percent vs. 66 percent of the residual group). However, on the average, these severely disabled clients spent about one and one-half months less in training (15.5 months vs. 17.1 months for the non-severe group).

Reasons for closure (not rehabilitated).—About one-third (31 percent) of all cases closed unsuccessfully occurred because the client could not be located or contacted. The proportion of severely disabled clients so closed was less than the proportion of the non-severe clients (28 percent vs. 36 percent). In fact, 68 percent and 77 percent of the severe and non-severe cases, respectively, closed not rehabilitated occurred as a result of a breakdown in the client-State agency relationship. This included the client's failure to cooperate or to accept services and the agency's inability to locate or contact the client. Expectedly, the severely disabled clients were more likely to have their cases closed not rehabilitated because of severity of handicap or unfavorable medical prognosis (19 percent vs. three percent of the non-severe group) and death (five percent vs. two percent). Transferral to another agency was the least common cause for unsuccessful closure (one percent of both groups was so closed).

Selected characteristics of clients rehabilitated: Severely disabled and non-severely disabled, by State vocational rehabilitation agencies, Fiscal Years 1975-1976*

Footnotes

* Preliminary

1/ Includes all clients with mental retardation as a major or secondary disabling condition.

2/ For those with one or more dependents.

 $\underline{3}/$ Primary source of support is client's largest single source, not necessarily his sole source.

 $\sqrt{2}$ With few exceptions, causes of other disabilities are either not applicable or inappropriate.

 $\underline{\boldsymbol{\mu}}/$ Not specifically educational, health, or welfare.

6/ Excludes strokes causing aphasia.

 $\ensuremath{\mathcal{I}}\xspace/\ensuremath{\mathcal{I}}\xspace$ Excludes malignant neoplasms causing conditions other than amputation of extramities.

 $\frac{8}{}$ Includes State agency-managed business enterprises.

2/ Includes Randolph-Sheppard vending stand personnel.

10/Percentages will not equal 100% because some clients received more than one type of service.

11/Includes only those clients receiving services paid for by the State vocational rehabilitation agency. Some clients received services which were obtained free or were paid for wholly or in part by other organizations or individuals or by the client.

INFORMATION MEMORANDUM RSA-IM -77- 39

February 15, 1977

TO:

STATE REMABILITATION AGENCIES (GENERAL) STATE REMABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

SUBJECT:

Number of Persons Rehabilitated and Active Cases Served by State Vocational Rehabilitation Agencies Per 10,000 Disabled Population, by Region and State, and Rank by State, Fiscal Years 1973 through 1976

CONTENT:

The accompanying tables show the number of persons rehabilitated and active cases served by State vocational rehabilitation agencies per 10,000 disabled population in Fiscal Years 1973 through 1976 and rankings by State. Similarly, rates and ranks for severely disabled persons rehabilitated (Fiscal Years 1974 to 1976) and served (Fiscal Year 1976 alone) are shown. It will be seen that rates of rehabilitations per 10,000 disabled population have declined in each of the last three years while rates for cases served have declined in two of the last three years.

The disability information found in the 1970 Census of Population, Series PC (1)-C, General Social and Economic Characteristics has been updated to reflect the total population growth to July 1, 1975 in each State. No disability data were available for Puerto Rico, Virgin Islands, or The Trust Territory of the Pacific Islands from the Census.

Interesting though the rates and ranks are, strict limitations in the use of these data must be observed. The rates of rehabilitations and active cases served are approximate indications of the degree to which the individual State vocational rehabilitation programs are reaching the disabled population in each State. It is possible, that many of the larger, more affluent, States may provide other programs for which the disabled may qualify, decreasing, in turn, the prominence of the State-Federal vocational rehabilitation program in these States. The rates, also, do not reflect, necessarily, the extent or quality of service the disabled are receiving.

Finally, it should be noted that States with rates equal to the nearest whole integer, were given the same rank. This convention was applied in retrospect to Fiscal Years 1973 to 1975 thereby causing minor changes to rankings found in earlier reports.

Acting Commissioner of Rehabilitation Services

HIGHLIGHTS

Table 1 shows the number of persons rehabilitated by State vocational rehabilitation agencies per 10,000 disabled population, and ranks by State for Fiscal Years 1973 through 1976.

Nationally, the rate decreased steadily from 296 rehabilitations per 10,000 disabled in Fiscal Year 1973 to 232 in Fiscal Year 1976. When the rates were ranked by State in Fiscal Year 1976, South Carolina led for the third consecutive year with 639 rehabilitations per 10,000 disabled population. Utah was second (512) followed by Oklahoma (416). Arizona was last, 51st, (101) and New York next to last (105).

Table 2 shows the number of severely disabled persons rehabilitated by State vocational rehabilitation agencies per 10,000 disabled population, and ranks by State for Fiscal Years 1974 through 1976. Nationally, the rehabilitation rate of severely disabled persons increased in Fiscal Year 1976 to 94 after a drop of one in Fiscal Year 1975 (90) from Fiscal Year 1974 (91). The latter was the first year in which rehabilitation of the severely disabled was distinguished from the non-severely disabled.

In Fiscal Year 1976, South Carolina outranked all other States in rehabilitations of the severely disabled per 10,000 disabled population (218). Kentucky was second (209) followed by New Hampshire (172). California ranked last, 51st, with a rehabilitation rate of 37 and Arizona was next to last (45).

Table 3 shows the number of active cases served by State vocational rehabilitation agencies per 10,000 disabled population, and ranks by State for Fiscal Years 1973 through 1976.

Nationally, the number of active cases served in Fiscal Year 1976 per 10,000 disabled population (943) was lower than for each of the other Fiscal Years, 1973 through 1975, for which the rates are shown in this report. South Carolina led all states with 2,427 active cases served per 10,000 disabled population. Utah was second (2,182) followed by North Dakota (1,872). Arizona ranked last, 51st, (391) preceded by California (501).

Table 4 shows the number of severely disabled active cases served by State vocational rehabilitation agencies per 10,000 disabled population, and ranks by State for Fiscal Year 1976. This is the only year that such rates were available for severely disabled cases served.

Nationally, 425 severely disabled active cases were served per 10,000 disabled population. New Hampshire led the States with a rate of 833. South Carolina was second (811) followed by North Dakota (765). Arizona ranked last, 51st, (188) and California was next to last (229).

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD DIRECTORS, ORS

SUBJECT:

National Summary of Errors in Reporting Case Service Data (Form RSA-300) on Clients Whose Cases Were Closed Fiscal Year 1975

CONTENT:

The attached tables and text present for the first time a summary of errors made by State Vocational Rehabilitation Agencies in recording data on clients whose cases were closed in Fiscal Year 1975. The errors were detected by an RSA originated computer edit program run on RSA-300 records. Three types of errors are tabulated and possible causes are explained for each of sixty individual items. It is hoped the information contained in this report will help State Vocational Rehabilitation agencies improve the quality of reporting.

Acting Commissioner of Rehabilitation Services

NATIONAL SUMMARY OF ERRORS IN REPORTING CASE SERVICE DATA (FORM RSA- 300) ON CLIENTS WHOSE CASES WERE CLOSED IN FISCAL YEAR 1975

INTRODUCTION

This paper presents a national summary of reporting errors made by State rehabilitation agencies in submitting data on the personal and program related characteristics of clients whose cases were closed out in Fiscal Year 1975. The errors were detected by a computer edit program devised by RSA to determine the completeness and consistency of reported data elements shown on the Case Service Report (Form RSA-300)

PURPOSE OF REPORT

The intention of this paper is

- a) to point out some of the most common errors found in the reported data
- b) to explain why they may have occurred and
- c) to seek agency cooperation in reducing, if not eliminating the frequency of these errors.

A preliminary review of the data elements for cases closed in Fiscal Year 1976 indicates that many of the same errors were still being made. It is hoped that this report will have some impact on the quality of reported data for the balance of Fiscal Year 1977. Subsequent papers of this sort will attempt to measure improvments, if any, in the quality of reporting.

PREVIOUS INFORMATION

Please note that agencies have already been sent copies of their computer reports for Fiscal Year 1975 via-IM-76-86, dated June 11, 1976. Also transmitted at that time was a long listing of the RSA edit rules employed for each data element. Agencies can compare their own edit reports against the figures shown in this paper to determine, on an item-by-item basis, whether their error rates were greater or less than the national "average". More important for agencies however, would be comparisons with their own edit reports over time to determine whether error rates are declining.

FOCUS ON REHABILITATED CLOSURES

Although there are six types of closure from the rehabilitation process, this paper focuses almost entirely on rehabilitated closures. For this group, it is expected that reporting would be most complete and consistent, but that errors made on rehabilitated cases would faithful-

ly reflect the types of errors made on the other closures. For these other closures, only one characteristic is shown, viz, reason for closure (See Table 2). The accompanying Table 1 shows the number of errors made in reporting each of 60 RSA-300 items for cases closed rehabilitated in Fiscal Year 1975. It also shows each type of error made as a percent of all rehabilitated cases tabulated. The number of such tabulated rehabilitations was 314,962. The 60 RSA-300 items are listed in order from the most poorly reported item (i.e. most errors) to the best reported item (i.e. fewest errors)

TYPES OF ERRORS SHOWN IN REPORT

Three types of reporting errors are highlighted in this report. The first error occurs when items are left blank. Some blanks are understandable and are not counted as errors. For example, no information is expected for time on public assistance for non-public assistance cases. For most data elements, however, blanks are not legitimate codes.

The second type of error occurs when an agency uses a retreat code, usually a code Y, to indicate that information for a particular item is not available. In only three of the 60 data elements used for rehabilitated clients did retreat coding affect more than two percent of the records.

The third type of error is the invalid code. A code is invalid if:

a) it is not a legitimate code, i.e. it falls outside of the range of codes that are acceptable for a particular item or

b) it is a legitimate code, but is not consistent with the coding for another item (e.g. the major disabling condition is blindness, but the code for severe disability is not indicated. Certain disabilities such as blindness automatically define a case as "severe"). It is not possible through the present editing system to distinguish which kind of invalid coding ("a" or "b" above) is involved. However, a knowledge of the data item in question and the type of edit employed usually make it possible to infer which type of invalid coding was made.

ITEMIZED SUMMARY OF MAJOR FINDINGS

- 1. The most errors occurred in reporting SSI status at referral (61,622 of 314,962 cases or 19.6%). Over 60 percent of these errors were in the form of blanks and retreat codes. This is understandable because SSI status was a new item in Fiscal Year 1975 and for many closures that year this item was unavailable at referral. The remaining cases had invalid codes. These were caused in two ways.
- a) by using a non-legitimate code 4 (not known if applicant) on cases accepted for VR or extended evaluation or
- b) by not using code 1 (applicant allowed benefits) when codes 1,2,3, or 6 were used for public assistance status at referral. These

latter codes indicate various types of SSl categories. It should be noted that the foregoing errors occurred with much less frequency for the SSl status item at the time of case closure.

2. Eleven of the next 17 most common errors revolved about the different types of services rendered. These ranged from 46,991 errors, or 14.9%, for other academic training to 29,951 errors, or 9.5% for personal adjustment training. Almost invariably, these errors were caused by blanks, probably for cases that did not receive the service in question.

The Statistical Reporting System Manual Chapter clearly indicates that a code "0" should be used whenever a client does not receive a particular type of service. It is interesting to note that diagnostic services, alone among all types of services, was very well reported with blanks showing up in only 2,462 (0.8%) of all cases

- 3. Type of institution at referral was the sixth most poorly reported item, with errors arising in 42,415 of the 314,962 tabulated rehabilitated cases (13.5%). The large majority of these errors were blanks or retreat codes. This item, like SSI status at referral, was new in Fiscal Year 1975 so that large numbers of non-responses were not unexpected. There were some invalid codes, however, affecting over 5,000 cases. Here, only codes 00 through 17 are valid.
- 4. The ninth leading misreported item was county code for which 36,580 errors errors were found affecting 11.6% of all rehabilitated cases. Somewhat less than one-half of the errors were blanks while the remaining errors were invalid codes. The scope of invalid codes is surprising because the only edit check made is whether the three digit field is numeric.
- 5. The 12th leading error-prone item was monthly family income at referral. Here 32,687 errors were uncovered which encompassed 10.4% of all rehabilitated cases. Nearly four-fifths of these errors were retreat codes. This was, by far, the most heavily retreat coded item of all 60 items shown in Table 1.

Family income is not a new item; it was first used in Fiscal Year 1970. Nevertheless, the coverage for this item has always been relatively poor. We believe that some counselors make no effort to secure the approximate monthly family income for VR clients. The item is coded for ten groups of income and exact amounts are not required. The lack of effort on the part of a few counselors is unfair to the large majority of counselors and other personnel who conscientiously complete this item. Monthly family income is of especial importance in deriving estimates of the number of poor persons in State agency caseloads.

6. Another new item in Fiscal Year 1975 was cost with SSl funds. There were 32,637 cases with errors in this item (10.4%) all of which were blanks or retreat codes. However, the newness of this item may not have been the main factor causing the numerous blanks and retreat

- codes. Other cost items which are of long-standing exhibited similar problems. Cost with Trust Funds had 31,653 errors (10.1%) and cost in rehabilitation facilities had 31,174 (9.9%). The overwhelming majority of errors are caused by the absence of zeros to indicate that there was no cost. Blanks are not acceptable for any cost item.
- 7. A surprising 29,594 errors (9.4%) were found in as simple an item as <u>number in the family</u>. Roughly nine-tenths of these errors were invalid codes making this the worst item for invalid codes of all 60 items shown in Table 1. The only legitimate codes here are 1 to 9 and X (indicating ten or more persons in the client's family). All zeros are invalid codes since even if the client lives alone he is in a one-member family. Please insure that this item is correctly coded in the future.
- 8. Social Security claim type exhibited 28,954 errors (9.2% of all 314,962 rehabilitated closures). A large minority of these errors were blanks while the others had invalid codes. The only valid codes for this item are 1 through 4 and 9. If the item does not apply to a particular case, code 9 should be used.
- 9. There were 25,893 errors (8.2%) discovered in the new item, referred by Social Security Administration. The large majority of these errors were invalid codes brought about because code 2 (referred by SSA) was not used when code 50 and 51 were indicated as the initial source of referral (SS Disability Determination Unit and SS District Office, respectively). This item is intended to reflect Social Security as a referral source whether it was the initial, secondary, tertiary or whatever referral source.
- 10. Weekly earnings at referral drew 24,592 errors (7.8%), the majority of which consisted of invalid codes. This item is crosschecked against work status at referral and four tests are applied. Two of these tests probably led to most of the invalid code designations. If the work status code was 1 or 2, salaried worker in the competitive labor market or sheltered workship, respectively, the earnings figure must be one dollar or more. Zero dollars would not be valid. Also, if the work status was code 7 or 8 not working: student or not working: other, respectively the earnings figure must be zero dollars. Anything other than zero would be invalid.
- 11. Some 23,974 errors (7.6%) were found in <u>highest grade of school</u> completed. The large majority of these errors were invalid codes.

 Code XX (special education) must be used for this item whenever mental retardation is the major or secondary disabling condition.
- 12. Most of the 23,474 errors (7.5% of all 314,962 cases) made for Secondary disabling condition were blanks. When there is no secondary disability, code 999 should be used.
- 13. SSDI status at referral showed 21,321 errors (6.8%). Most of these

were invalid codes. Here a code 1 (allowed benefits) should appear if code 07 (SSD1 benefits) is recorded for primary source of support at referral. Also, a code 4 (not known if applicant) is not legitimate when cases are accepted for VR or extended evaluation.

- 14. Social Security Account Number is an important item particularly because it enables RSA to obtain post-closure earnings data from Social Security Administration records on former VR clients. Most of the 18,231 errors (5.8%) that showed up for this item were invalid codes. Our edit for this item was of a simple nature. Cases passing this edit, therefore, do not necessarily have valid account numbers. Every effort should be made to complete this item correctly because the usefulness of RSA-SSA Data Link information depends upon it.
- 15. The Federal Special Program Identification item had 15,177 errors (4.8%). Most of these were invalid codes. The main cause of these invalid codes was probably inconsistent reporting between the designation "Severe disability" and other codes found elsewhere on the RSA-300 which indicate that a case is severely disabled. For example, if the SSD1 status at referral or closure is coded 1 (allowed benefits), this should be reflected as a "severe" case in the FSPI item. Also, if public assistance status at referral or closure is coded 2 or 3 (SSI-blind or SSI-disabled, respectively) this is a severe case. Records checked as Trust Fund or SSI-funded cases are also automatically designated as severe as are cases which show SSD1 benefits as the primary source of support. Finally, and probably most importantly, there is a listing of major disabling conditions such as blindness and deafness which qualify a case as severe. Please consult RSA-IM-76-86 for the complete listing of these disability codes.
- 16. The majority of the 12,048 errors(3.8% of all 314,962 rehabilitated cases) affecting the time on public assistance item were retreat codes. The item calls only for an approximation of how lon recipients had been receiving payments when they became VR clients and should be reported.
- 17. Public assistance type at referral exhibited 11,801 errors (3.7%). The majority of errors were invalid codes. Five different edits are employed here and all of them could have contributed to the number of invalid codes. We will mention only
- a) that codes 0 through 6 and 8 are legitimate; code 7 is not to be used and
- b) that codes 1,2,3,6 or 8 must appear if SSl status at referral is coded 1 (allowed benefits). The other edits are shown in RSA-IM-76-86.

ITEMS WITH LOWER ERROR RATES

Thus far, we have gone through half of the 60 items shown in Table 1. The remaining items had errors with a less than "average" frequency

and do not pose as much a problem as do the data elements previously mentioned. Some of these remaining items, however, are discussed below when invalid coding accounted for a more than two percent error rate, i.e. more than two percent of the 314,962 cases had invalid codes.

Disability as reported at referral- The only legitimate codes for this item are shown in the "Disability Code Table" of RSA-IM-76-86. Months in statuses 00-02- Our edit rejects entries that exceed 59 months. It is remarkable that so many cases appear to remain in the referral and applicant statuses for five years or more. Either this is a problem of properly recording months or cases are "lost" and forgotten about.

Monthly amount of public assistance at referral- There must be a recorded dollar amount if it is indicated that the client was on public assistance at referral through codes 1 to 6 or 8 (various types of PA categories). On the other hand, the monthly amount should be zero or blank if the type of PA is coded 0 (no PA).

Months in status 06- All apparent errors in this item were classified as invalid codes. The only accepted codes were 01 to 18 months for cases entering extended evaluation. It is possible, of course, for a case to have been in extended evaluation for less than one month. This would show up as zero and be labelled as an invalid code. Perhabaps our edit is too tight here. However, it is hard to imagine that there were nearly 10,000 extended evaluation cases showing zero months in EE. It is probable that many of these cases showed months in excess of 18, the maximum legal length of time that a client can remain in EE.

Months in statuses 10 to 24- The length of time in these statuses should be equal to or greater than the combined lengths of time spent in status 18 (training) and statuses 20 and 22 (ready for and in employment, respectively). Too often, however, the parts are greater than the sum.

Cost of all services- Total cost is checked against Trust Fund and SSI cost and cost in rehabilitation facilities. The combined Trust Fund and SSI cost vs. the cost in facilities, whichever is greater, must be equal to or less than the total cost. Unfortunately, nearly 9000 rehabilitated cases failed to reflect this simple relationship.

Months in status 18- A stated number of months in training (status 18) should be recorded if one or more of the types of training are indicated under the item which lists the various types of services.

REASONS FOR CLOSURE

Cases not accepted for VR- Of 605,315 cases recorded as not accepted for VR services in Fiscal Year 1975, the item on reasons for closure exhibited 25,001 errors (4.1%). The overwhelming majority of these

errors were shown as invalid codes. In this instance, blanks and zeros are considered as invalid codes when a not accepted closure from either status 00 or status 02 is indicated. The only legitimate codes are 1 through 9 and Y.

Cases not rehabilitated— Of 138.569 cases recorded as not rehabilitated in Fiscal Year 1975, 13,591 (9.8%) had errors in the item on reasons for closure. Almost all of these errors were invalid codes. The only legitimate codes here are 1 through 7 and Y. Codes 8 and 9 are not valid because they represent reasons appropriate for non-acceptance only (no disabling condition and no vocational handicap, respectively).

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

SUBJECT:

Number of Rehabilitations: October 1 to December 31,

1975 and 1976

CONTENT:

From October 1 through December 31, 1976 State agencies rehabilitated 73,376 persons, a decline of 9.3 percent from the same three month period a year earlier when 80,894 persons were rehabilitated. Rehabilitations in December 1976 numbered 24,317, a decrease of 20.8 percent from the 30,694 rehabilitations in December 1975. This was the fewest number of rehabilitations in any December since 1970.

These declines may be more imagined than real because of the shift in the fiscal year cycle starting on October 1, 1976. Traditionally, the first quarter of a fiscal year produces the fewest rehabilitations of any quarter in that year. The comparison of the first quarter of Fiscal Year 1977 to the second quarter of Fiscal Year 1976 may, therefore, produce a misleading trend.

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND)

ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

Number of Rehabilitations: October 1, 1976 to January 31,

1977 and October 1, 1975 to January 31, 1976

CONTENT: State agencies rehabilitated 96,923 persons between

October 1, 1976 and January 31, 1977. This represents a decline of 7.6 percent from the same four month period a year earlier, when 104,844 persons were rehabilitated.

Rehabilitations in January, 1977 numbered 23,892, a decrease of 0.2 percent from the 23,950 rehabilitations in January, 1976. Notwithstanding this very small monthly decline, January 1977 registered the fewest number of rehabilitations in any January since 1972.

April 21, 1977

TO:

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD DIRECTORS, ORS

SUBJECT:

Number of Rehabilitations: October 1, 1976 to February 28, 1977 and October 1, 1975 to February 29, 1976

CONTENT:

State agencies rehabilitated 118,588 persons during the five-month period between October 1976 and February 1977. This represents a decline of 7.8 percent from the same period a year earlier.

Rehabilitations in February 1977 numbered 22,490, a decrease of 5.2 percent from the 23,717 rehabilitations in February 1976. This was the 4th consecutive monthly decline in rehabilitations in Fiscal Year 1977. Additionally, the 22,490 persons rehabilitated in February 1977 represented the fewest rehabilitations in any February in the last six years.

STATE REHABILITATION AGENCIES (GENERAL) STATE REHABILITATION AGENCIES (BLIND) ASSISTANT REGIONAL DIRECTORS, OHD

DIRECTORS, ORS

SUBJECT:

Handicapped and Older Persons Employed in State Vocational Rehabilitation Agencies Fiscal Year 1976

CONTENT:

The accompanying tables contain statistical information on handicapped and older persons employed on a permanent fulltime basis by State vocational rehabilitation agencies on June 30, 1976 and the number of new hires of these persons during Fiscal Year 1976. The reporting document for these data was Part IX of Form RSA-2.

On June 30, 1976, there were 31,884 persons employed in State vocational rehabilitation agencies on a permanent fulltime basis. Of that total, 4,216, or 13.2 percent, were handicapped persons. Also, some 4,081 persons were hired during Fiscal Year 1976 and were still employed at the end of the year. Of these, 455, or 11.1 percent, were handicapped.

Among employees on board on June 30, 1976, 10.8 percent of the handicapped and 13.1 percent of the non-handicapped were newly hired during Fiscal Year 1976. This difference may simply reflect greater job mobility among the non-handicapped. It should be noted, however, that 12 agencies which did some hiring during Fiscal Year 1976 hired no handicapped workers.

The term "handicapped" used in this report derives from Section 7(6) of the Rehabilitation Act, as amended, and includes persons having a "record" or past history of disability, as well as persons who may be regarded as handicapped by others. Given the latitude of the term, State agencies might have applied differing criteria in determining who is or is not handicapped, resulting in numbers reported which are not strictly comparable from agency to agency.

Acting Commissioner of

Rehabilitation Services

HANDICAPPED EMPLOYEES OF STATE REHABILITATION AGENCIES: FISCAL YEAR 1976

I. Handicapped persons employed by State vocational rehabilitation agencies: National data

- A. Staff on June 30, 1976 (Table 1A)

 1. On June 30, 1976, there were 4,216 permanent, full-time handicapped persons employed by State vocational rehabilitation agencies. They represented 13.2 percent of the 31,884 total permanent full-time staff on that date.
 - 2. Approximately three handicapped workers in five (62.2 percent 2,621 persons) were employed as counselors and other professionals. Among all 31,884 agency employees, only 54.4 percent were counselors and other professionals. Thus, the handicapped employee was somewhat likelier than the non-handicapped to be a professional.
 - 3. The 2,621 professional handicapped employees comprised 15.1 percent of the total professional staff of 17,340. In contrast, the handicapped accounted for only 11.0 percent of the non-professional staff (1,595 handicapped persons among 14,544 non-professionals).
- B. New hires during Fiscal Year 1976 (Tables 1B and 1C)
 - 1. Of the 31,884 permanent full-time agency employees on June 30, 1976, 12.8 percent, or 4,081, had been hired during Fiscal Year 1976. Of these 4,081 new employees, 455, or 11.1 percent, were handicapped persons.
 - 2. The majority of the new handicapped workers (53.0 percent 241 persons) were classified as counselors and other professionals.
 - 3. The 455 handicapped new hires represented 10.8 percent of all 4,216 handicapped persons employed on June 30, 1976. By way of contrast, 13.1 percent of all non-handicapped employees were new during the year. The difference in these percents may be a reflection of greater job mobility among the non-handicapped and also among the non-professionals who were less likely than the professionals to be handicapped.
- II. Handicapped persons employed by State vocational rehabilitation agencies:
 Agency data (Tables 2 and 3)
 - A. Staff on June 30, 1976

 1. A higher proportion of permanent full-time employees in agencies for the blind than in general agencies were handicapped. The handicapped accounted for 18.1 percent of all employees in agencies for the blind on June 30, 1976 compared to 12.8 percent of all employees in general agencies on that date.

2. Considerable variation in the proportion of the handicapped among all employees, by agency, was observed. Among general agencies this proportion ranged from 0.9 percent in Rhode Island to 27.0 percent in South Dakota. Among agencies for the blind, the proportion ranged from 4.1 percent in New York to 33.7 percent in Michigan. Here is a brief list of those agencies with the highest and the lowest proportions of their employees who were handicapped as of June 30, 1976.

General agencies	Percent Handicapped	Rank	Blind agencies	Percent Handicapped	Rank
South Dakota Delaware Oklahoma Average Florida Puerto Rico Rhode Island	27.0 25.3 25.0 12.8 5.0 3.1	1 2 3 - 52 53 54	Michigan Idaho Iowa Average South Carolina Minnesota New York	33.7 32.1 28.3 18.1 a 8.3 5.7 4.1	1 2 3 - 27 28 29

- 3. Probably contributing to the variations among agencies in the proportion of their employees who were reported as handicapped, was the way that agencies interpreted the definition of "handicapped individual" found in Section 7(6) of the Rehabilitation Act, as amended. It is unfortunate, for statistical purposes, that the definition includes people with a "record" of an impairment as well as those "regarded" as having an impairment. It is easy to see how agencies could differ from one another in applying the definition to individual cases. It is possible, therefore, that reported agency differences in hiring the handicapped may be as much imagined as real.
- 4. Nationally, 62.2 percent of all handicapped employees in State agencies were counselors and other professionals. In general agencies, the professionals accounted for 60.4 percent of all handicapped employees and in agencies for the blind, 75.6 percent.
- 5. One hundred percent of the handicapped employees in the general agencies in Rhode Island (1 person), Puerto Rico (25 persons) and Montana(19 persons) as well as in the blind agencies of Rhode Island (3 persons), Virginia (24 persons), Minnesota (3 persons) and Idaho (21 persons) were reported as professionals. On the other hand, less than one-half of the handicapped employees in the general agencies of New Jersey, Connecticut, Mississippi, New Mexico, Oklahoma, Texas, and Oregon were professionals. In every agency for the blind at least

50 percent of all handicapped employees were professionals.

B. New hires during Fiscal Year 1976 (Table 4)

- 1. General agencies reported that 11.0 percent of all persons hired during fiscal year 1976 and on board on June 30, 1976 were handicapped. This proportion for agencies for the blind was 12.5 percent.
- 2. By agency, the percent of new hires who were handicapped showed considerable variation. Arizona reported hiring 28 handicapped persons out of a total of 53 new persons employed on June 30, 1976 (52.8 percent). A dozen agencies, however, had no handicapped persons among their new hires in Fiscal Year 1976. These agencies were Connecticut, Rhode Island, Utah, Wyoming and Nevada among the general agencies and New Jersey, Delaware, Mississippi, South Carolina, Louisiana, Idaho and Kansas among the agencies for the blind.

III Older workers employed by State vocational rehabilitation agencies

- 1. Only 1,210 (3.8 percent) of 31,884 permanent full-time employees on June 30, 1976 were 60 years of age or more. Most of these older workers (54.2 percent 656 persons) were counselors and other professionals.
- 2. Only 31 persons 60 years old or older were hired during Fiscal Year 1976 and were employed as of June 30, 1976. These 31 amounted to only 2.6 percent of all such older workers employed on that date. In addition, they amounted to only 0.8 percent of all 4,081 persons hired during Fiscal Year 1976.
